

>>Hello. My name is Jonathan E. Chen.

I'm passionate about startup culture, game design, UX, and Apple. I like building things, designing products, and collaborating with awesome people. I'm an aspiring entrepreneur who loves getting shit done. This, as you can see, is not your typical boring resume with no soul.

>>Experience Points

I'm studying computer science & business administration at Carnegie Mellon University and graduating in May, 2013. Part of my curriculum is focused on human-computer interaction. In Summer 2011, I worked as a front-end & Android developer for InhaleDigital, a startup in San Francisco. In Summer 2010, I worked as a research assistant at the Robotics Institute of CMU on computer vision projects. My GPA is 3.22, though if that matters a lot to you then you're probably not my ideal employer.

>>Skill Set

I develop on Android in Java. I enjoy getting down and dirty with C, Perl, and shell scripting. Python makes me feel warm and fuzzy inside. I love making cool stuff on the web with a little HTML/CSS/JavaScript magic. Using git for version control makes me giggity. Eclipse is okay, but TextMate and vim make me sing. I believe Standard ML was invented to torture students. In my previous life, I made Flash games with ActionScript 3. In my spare time, I'm learning to develop native apps on the iOS and web apps with Ruby on Rails and Node.js.

>>Bonus Points

Random things I do for fun are snowboarding, browsing Hacker News and Reddit, playing video games, stalking VCs, and traveling with my Canon EOS Rebel T2i. On campus, I'm helping to colonize the local chapter of Delta Upsilon as a founding brother. I'm also starting an entrepreneurship club at CMU with an emphasis on hacker culture. In the meantime, I serve as a Resident Assistant to a dormitory of international exchange students and am an active member of the Taiwanese Student Association. The typeface used in this resume is Maven Pro. If you've read my resume in its entirety, then I would love to work with you.
