Hello, my name is **Jonathan E. Chen**. I go by **@wikichen** on the web.

I'm a self-taught **designer** with a **computer science** background.

Check out my portfolio at **design.wikichen.com**.

Feel free to reach me at design@chen.io or on Twitter.

I believe that good design tells a story. Here's mine.

now

Jun 2013
Reinvigorated to pursue **a design role at a startup** to further develop my design skills; committed to attend Stanford d.school for a Master's in product design (in a few years)

Jan 2013 to May 2013
Relocated to Chapel Hill, NC, where I **tried and failed** to build a healthcare startup with a couple of friends, and learned (the hard way) that I'm not ready to pursue my entrepreneurial dreams yet

Jul 2012
Moved to **San Francisco**, ran IT support for a hacker hostel, set up a passive income stream by flipping apartments on Airbnb, and started getting serious about learning design

Jun 2012
Had a life-changing conversation with **David Kelley** (founder of IDEO and Stanford d.school), who convinced me to pursue my passion in design

May 2012
Graduated **Carnegie Mellon University** in three years with a bachelor of science degree in computer science, turned down engineering job offers to find my true passion in life

Nov 2011
Took a communication design course that marked the beginning of my love affair with design, then enrolled in as many **human-computer interaction** courses as I could

May 2011 to Sep 2011
Interned for a social gaming startup and picked up **front-end** and **Android development** (latter because they pivoted midway through the summer)

Mar 2010 to Oct 2010
Held a **research position** on the 3DVIS team at CMU's Robotics Institute, where I worked on various computer vision projects and destroyed a $150k 3D laser scanner

2009

This resume is set in Gotham and her Narrow & XNarrow siblings.
